

AFVTEch finishes development on a Ford Fuel Injection System

OCT 29, 2006

AFVTEch finishes development of a Ford Fuel injection system. AFVTEch has tested in-house this system on the following fuels; Hydrogen H₂, Natural Gas CNG and the combination of Hydrogen/Natural Gas HCNG. This system is designed to be CAN and OBDII compliant and is ready for EPA or CARB vehicle certification testing. This system is a Digital Sequential Fuel Injection (DSFI) system that can be applied to not only vehicles but also can be used in power generation applications. This system is the ultimate way to reduce emissions and increase the longevity of the engine it is installed on. For more information, please call 602-233-0197
